

Document and email management from the programs you use every day

Full-function SharePoint document and email management starts with

MacroView DMF™ v7

MacroView DMF™ (Document Management Framework) v7 has been developed by MacroView to deliver SharePoint®-based document management in the applications that you use every day.

MacroView DMF™ enables you to:

- Perform all document management tasks in Outlook® — browse a tree-view of your SharePoint environment and drag and drop to save emails and attachments
- Deploy a solution that is built for high volume document management with support for versioning, legal holds, workflows, custom metadata, hierarchical taxonomies and much more
- Search your SharePoint document store in full-text or based on metadata from Outlook
- Access SharePoint 2007 and SharePoint 2010 document stores from Office 2003, 2007 or 2010
- Maximise the return on your SharePoint investment — use the platform as more than just an intranet

MacroView

MacroView DMF™ (Document Management Framework) v7 brings the simplicity of the file share and the power of a traditional document management system to Microsoft® SharePoint® 2007 and 2010 from within the applications that you use every day.

Superior save experience from your favourite apps

Drag and drop to save emails and their attachments to SharePoint directly from Microsoft® Outlook®

Save documents, spreadsheets, presentations and PDFs to SharePoint® directly from Microsoft Word®, Excel®, PowerPoint® and Adobe® Reader®/Acrobat®

Consistently capture *any* SharePoint metadata column type including Business Data Catalog, People Picker, and in SharePoint 2010 Business Connectivity Services and Hierarchical Term Sets across all applications

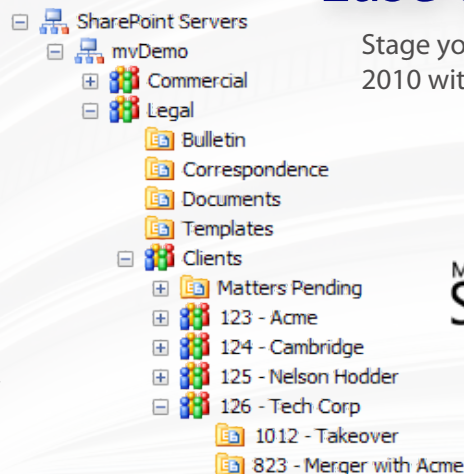

Search for what you want from where you want

Accurately search for documents and emails stored in SharePoint based on content and metadata from within applications like Microsoft Outlook — no need to use the browser

Search for "My Documents" to return all documents that you've saved to your SharePoint environment

Customize metadata search to suit your requirements

Visualise your SharePoint store

Browse a tree of your whole SharePoint environment showing site collections, sites, libraries, folders and (in SharePoint 2010) managed metadata navigation

Jump to anywhere in the tree using efficient filtering and search

Familiar interface — makes using SharePoint like using a file share in applications that you use every day which helps minimise training

"The tree-view is the easiest way to make effective use of SharePoint"

Ease of administration and deployment

Stage your migration — run MacroView DMF in Office 2003, 2007 or 2010 with either SharePoint 2007 or 2010

Highly configurable by end users and administrators via Group Policy

Application Programming Interface (API) available to extend MacroView DMF into other applications

Streamlined server and client side deployment

"There is no better product available that makes Outlook communicate with SharePoint"
Michael Auschrat, Cohos Evamy

Designed to perform efficiently even with the largest SharePoint document and email stores

DMF Explorer lets you move and copy files to any SharePoint location you have permission to while retaining versions and metadata

Support for opening previous versions of documents as well as SharePoint 2010 legal holds and records management features

Powerful management of high volume document stores

MacroView DMF Client installs as an MSI and requires Microsoft Office 2003, 2007 or 2010; Adobe Reader or Acrobat 7.0 and above; .NET Framework 3.5; and Visual Studio Tools for Office.

MacroView DMF Server installs as a SharePoint Solution and requires Microsoft Office SharePoint Server 2007, Windows SharePoint Services v3, SharePoint Server 2010 or SharePoint Foundation 2010.
